

FosforSyre 75%

Application

Liquid, concentrated phosphorus for plant fertilization.

Phosphoric Acid 75% is used as a phosphorus source, but it should be noted that it affects both pH and EC (electrical conductivity) significantly. In addition, pH can be difficult to control, especially when ammonium fertilizers and/or larger amounts of calcium nitrate are also used.

Compatibility

When using Phosphoric Acid 75%, protective goggles and gloves must be worn.

Content

Element	P	K	N	Mg
Weight %	23,7			
Grams per liter	374			

When applying the quantities listed below per 1000 liters of water, the following ppm (grams per 1000 liters) will be supplied.

If the zinc requirement is lower than what is provided by a normal dosage of Minomit® or Mikronit®, a micronutrient mix can be produced to meet your specific needs.

Data

Minimum storage temperature: 0°C

Density: 1.58 kg/L

FosforSyre 75% per 1000 L water

	N (ppm)	P (ppm)	K (ppm)	Mg (ppm)
30 ml			11,2	
40 ml			15,0	
50 ml			18,7	
75 ml			28,1	
100 ml			37,4	
125 ml			46,8	
150 ml			56,1	

About us

At Interfiller, we work closely with our suppliers, partners and customers to create quality products with results. For almost 50 years, Interfiller A/S has built a solid company that today produces Danish products for both horticulture and agriculture.

At Interfiller, we take pride in in-depth knowledge about the products we sell and their practical application. Chelated micronutrients ensure reduced fertilizer consumption and enable agriculture and horticulture to increase yields and improve product quality while reducing environmental impact.

Through our products, production processes and services, we work together with our customers, employees and strategic partners to contribute to a global impact that helps secure our common future.
