KobberChelat 2

Application
Aqueous copper solution for plants. The copper is EDTA-chelated and therefore easily available to plants.

KobberChelat 2 is used where additional copper is required beyond what is supplied through the normal dosage of Minomit® or Mikronit®.

Compatibility
KobberChelat 2 can be mixed with all common fertilizers, but it must not be added to the acid tank.

When using the quantities listed below per 1000 liters of water, the following ppm (grams per 1000 liters) will be supplied.

If the copper requirement is lower than what is provided by a normal dosage of Minomit® or Mikronit®, a micronutrient mix can be produced to suit your specific needs.

Data
pH concentrate: 7
Minimum storage temperature: 5°C
Density: 1.2 kg/L

About us

At Interfiller, we work closely with our suppliers, partners and customers to create quality products with results. For almost 50 years, Interfiller A/S has built a solid company that today produces Danish products for both horticulture and agriculture.

At Interfiller, we take pride in in-depth knowledge about the products we sell and their practical application. Chelated micronutrients ensure reduced fertilizer consumption and enable agriculture and horticulture to increase yields and improve product quality while reducing environmental impact.

Through our products, production processes and services, we work together with our customers, employees and strategic partners to contribute to a global impact that helps secure our common future.
