KobberSupport 20

Application
KobberSupport is used to prevent or correct copper deficiency and to maintain a balanced micronutrient profile in the plant. Copper plays an essential role in chlorophyll formation, enzyme activation, and lignin synthesis, which supports strong cell walls and resistance to disease.

KobberSupport is particularly relevant in crops where an imbalance between molybdenum and copper has been identified. A typical balance is 3-4 parts copper to 1 part molybdenum, which can best be determined through a plant sap analysis.

The product contains chelated copper for efficient and rapid uptake and can be applied both to the soil and as a foliar fertiliser.

Compatibility
KobberSupport is compatible with most crop protection products and liquid fertilisers. If in doubt, perform a jar test in a small container before mixing.

Dosage
Maximum 2.0 L/ha per application.

Soil application:
Use Support Kip-R 0.2–0.4 L/ha (see product information Support Kip-R).

Foliar feeding:
Use Support Super-ADD 0.1 L per 100 L of water (see product information Support Super-ADD).

Data
pH (concentrate): 7
Minimum storage temperature: 5 °C
Density: approx. 1.20 kg/L

Content per liter

N	P	K	S	Mg	B	Mn	Cu	Zn	Mo	Fe
							20 g*			

* The contents are chelated

About us

At Interfiller, we work closely with our suppliers, partners and customers to create quality products with results. For almost 50 years, Interfiller A/S has built a solid company that today produces Danish products for both horticulture and agriculture.

At Interfiller, we take pride in in-depth knowledge about the products we sell and their practical application. Chelated micronutrients ensure reduced fertilizer consumption and enable agriculture and horticulture to increase yields and improve product quality while reducing environmental impact.

Through our products, production processes and services, we work together with our customers, employees and strategic partners to contribute to a global impact that helps secure our common future.
