

SpraySupport

Application

General wetting/spreading agent with additional defoaming effect. Low-foaming spreader and adhesive that reduces the surface tension of the spray solution, increasing wetting, which results in better coverage and adhesion of the active ingredients.

No phytotoxic effects have been observed on plants at a dosage of 0.3%.

Compatibility

Because the product is non-ionic, it can be mixed with commonly used fungicides, insecticides, herbicides, and foliar fertilizers.

Dosage

Dosage: 100 ml per 100 L water or 100 ml per hectare.

Read the instructions for the product being added before adding SpraySupport. SpraySupport should be added only when the tank is nearly full and under continuous agitation.

Storage: Store frost-free.

Content

Fatty alcohol ethoxylate.

Readily biodegradable (OECD 301 A–F).

About us

At Interfiller, we work closely with our suppliers, partners and customers to create quality products with results. For almost 50 years, Interfiller A/S has built a solid company that today produces Danish products for both horticulture and agriculture.

At Interfiller, we take pride in in-depth knowledge about the products we sell and their practical application. Chelated micronutrients ensure reduced fertilizer consumption and enable agriculture and horticulture to increase yields and improve product quality while reducing environmental impact.

Through our products, production processes and services, we work together with our customers, employees and strategic partners to contribute to a global impact that helps secure our common future.
