Support Kip-R

Application
Low-foaming spreader–sticker specifically designed for soil-applied products.

Kip-R encapsulates the herbicide and ensures an even and uniform distribution in the upper soil layer. This occurs due to an electrically charged surface that increases adhesion in the upper soil zone, thereby prolonging the presence of the active ingredient in the root zone.

Kip-R helps maintain the effectiveness of the chemistry, reduces leaching, and increases crop tolerance.

Kip-R can be used with all soil herbicides available on the market.

Compatibility
Compatible with most crop protection products and liquid fertilizers. If in doubt, make a small test mixture in a separate container.

Dosage
400 ml per ha at temperatures below 15°C
200 ml per ha at temperatures above 15°C

Read the instructions for the product being added before Support Kip-R is added.

Support Kip-R should be shaken before use. Support Kip-R is added only when the tank is approx. ¾ full and under continuous agitation.

Storage: Store frost-free.

Content
Aliphatic hydrocarbons, fatty alcohol ethoxylated and propoxylated, fatty acids (C18–C20), colorant.

About us

At Interfiller, we work closely with our suppliers, partners and customers to create quality products with results. For almost 50 years, Interfiller A/S has built a solid company that today produces Danish products for both horticulture and agriculture.

At Interfiller, we take pride in in-depth knowledge about the products we sell and their practical application. Chelated micronutrients ensure reduced fertilizer consumption and enable agriculture and horticulture to increase yields and improve product quality while reducing environmental impact.

Through our products, production processes and services, we work together with our customers, employees and strategic partners to contribute to a global impact that helps secure our common future.
