

ZinkSupport 20

Application

ZinkSupport is used to prevent or correct zinc deficiency and to ensure balanced micronutrient availability in the plant. Zinc plays a vital role in enzyme function, hormone regulation, and protein synthesis, all of which are essential for strong and healthy plant growth.

The product is especially useful in crops with high zinc demand or in soils with high pH, where zinc availability is naturally limited. ZinkSupport provides chelated zinc for fast and efficient absorption, ensuring reliable results even under challenging growing conditions.

The product can be used both as a foliar fertiliser and for soil application.

Compatibility

ZinkSupport is compatible with most crop protection products and liquid fertilisers. If in

doubt, perform a jar test in a small container before mixing.

Dosage

Maximum 1.0 L/ha per application.

Soil application:

Use Support Kip-R 0.2–0.4 L/ha (see product information Support Kip-R).

Foliar feeding:

Use Support Super-ADD 0.1 L per 100 L of water (see product information Support Super-ADD)

Data

pH (concentrate): 7

Minimum storage temperature: 5 °C

Density: approx. 1.15 kg/L

Content per liter

N	P	K	S	Mg	B	Mn	Cu	Zn	Mo	Fe
								20 g 		

 The contents are chelated

About us

At Interfiller, we work closely with our suppliers, partners and customers to create quality products with results. For almost 50 years, Interfiller A/S has built a solid company that today produces Danish products for both horticulture and agriculture.

At Interfiller, we take pride in in-depth knowledge about the products we sell and their practical application. Chelated micronutrients ensure reduced fertilizer consumption and enable agriculture and horticulture to increase yields and improve product quality while reducing environmental impact.

Through our products, production processes and services, we work together with our customers, employees and strategic partners to contribute to a global impact that helps secure our common future.
